Operating During Modernization – June 2, 2025

PIT has remained fully operational during our modernization, continuously serving the Pittsburgh community and furthering our place as a global leader in airport innovation and resiliency.

Our goal from the start was to modernize with minimal impact on our passengers, partners and team members. Delivering on that goal has taken a coordinated and intentional effort – we charged our team with working cross-functionally so that we could better navigate our complicated transformation while remaining fully operational.

We continue providing our community with a safe, efficient, reliable and resilient airport during our modernization, and we have accomplished this by aligning our operations and development functions. That means:

- Aligning airport safety, security and public health with construction site safety
- Coordinating airline, landside, airside and other operations with modernization design and construction activities as well as engineering, environmental and planning projects, and
- Aligning all operations with Operational Readiness & Transition programming
-

Our efforts are not only keeping PIT operational during construction, but they also contribute to our growth and are leading us to this year's arrival of a transformed PIT – an airport rooted in resiliency and designed for the future. [Read more here](#) about our continuous operation during modernization.
