

New PIT Weekly Update: Partnership delivers a new, modernized look

PIT's new terminal is the cornerstone of a modernization effort that has been underway for years – one that also includes a new parking structure, roadways, customer service building and airside renovations. The modernized PIT is designed to deliver a more efficient airport operation and an improved passenger, partner and team member experience.

Documenting the progress we have made on PIT's modernization is the result of a partnership between our team and a local company that specializes in piloting drones. This partnership enables us to capture video footage that is then transformed to provide a distinct perspective on our achievements and insight into the airport experience that will be available on opening day this fall.
